

Who's rethinking conventional roof construction?

Every significant Advance in building technology has unlocked opportunities for designers, builders, investors and users. Kingspan has built its reputation on rethinking the conventional to provide next-generation technology.

The key thoughts behind its roofing systems are flexibility, efficiency, durability, ease of erection, safety, and style. The strength and spanning capabilities of a Kingspan system offer designers the flexibility to provide maximum functionality of space.

It combines reliable thermal and air leakage performance with a total life expectancy in excess

of 40 years. Kingspan's smart energy design can reduce operating costs and lifetime Carbon Dioxide emissions up to 40%.

And Kingspan's FireSafe systems are approved by the insurance industry (Factory Mutual approval). Best of all, a Kingspan roof can be erected in half the time, thanks to its cleverly pre-engineered single component/single-fix installation.
