

# The secret of your success is in this formula

Einstein said that doing the same thing over and over and expecting a different result is insanity. A major shift has to happen.

Kingspan discovered the formula that changed “prefabrication” into “pre-engineered”, a major shift happened. Kingspan took the savings and speed of erection of prefabricated components and added two important elements: 1. Quality. 2. Aesthetics.

Kingspan wall panel systems are engineered to a level of quality that brings them into the consideration set of the serious designer. They have a lifetime expectancy in excess of 40 years.

Kingspan’s architectural wall systems offer designers a secret fix system with a wide choice of aesthetic wall solutions for horizontal and vertical applications. Available in cover widths of 600, 900, 1,000mm wide, they are ideal for incorporating into “image” buildings, where visual impact is a key element of the brief. External finishes available include micro-rib, euro-box, flat, mini-micro and wave profiles, all of which offer clean, crisp building lines. The panel joint details conceal the fasteners.

For example, the Kingspan KS1000 Optimo system represents a dramatic

breakthrough in pre-engineered wall systems delivering a clean, smooth and visually-appealing solution.

Another Kingspan innovation with huge implications for designers is LongSpan™ – a panel system that removes an entire phase of the build while it improves appearance and performance. You no longer need secondary steelwork or internal linings, thereby increasing floor space and creating uncluttered cleaner lines.

But what about the hot issues of the day: energy and greenhouse gas emissions? Kingspan’s energy-efficient design and performance reduces M&E plant and lifetime operating costs by up to 40%. PIR has twice the thermal efficiency of polystyrene (EPS) and mineral fibre systems. If Einstein’s formula for insanity is repeating your mistakes, the Kingspan formula for success is in constant innovation.
