

Kingspan has an instant greenhouse solution

You don't have to be Einstein to recognise that 1 is less than 4... that a single-component, pre-engineered, insulated roof and wall panel system is more thermally efficient than a site-assembled, multipart, built-up foil and fibre insulation roof and wall arrangement.

They offer 100% reliable thermal performance and insulation continuity. Kingspan's roof panel is twice as thermally efficient as Polystyrene (EPS) or mineral fibre systems.

In fact, KS1000 RW 60mm roof panel achieves an R value greater than 3.2 on its own, which is required under the new Part J energy provisions of the BCA.

Kingspan's energy-efficient design and performance can reduce plant and lifetime operating costs by up to 40%. And lifetime Carbon Dioxide (CO₂) emissions are reduced by up to 40%.

And they cost less to erect.

"Insanity... doing the same thing over and over again and expecting different results." **Albert Einstein**
